ABOUT ME

I'm a Full Stack AI Developer and Master's student in Artificial Intelligence at the University of Jyväskylä, with 5+ years of experience building production systems across backend, full-stack, and AI domains. I designed and deployed enterprise RAG and agentic applications at Konecranes using AWS Bedrock, Bedrock AgentCore, LangChain, and LangGraph, integrating LLMs with real business data and workflows, then documented the system and handed it over to the internal team. Earlier in my career, I built full-stack platforms and APIs using Python, Node.js, TypeScript, React, Next.js, and Laravel, including ERP systems, logistics platforms, and e-commerce applications, and I led a team of eight engineers on one of these projects. I combine solid software engineering foundations (Python, FastAPI, PostgreSQL, AWS, CI/CD) with applied AI expertise across conversational UIs, multi-agent orchestration, and vector retrieval systems. I work daily with AI-assisted coding tools such as Claude Code and Cursor, and I keep experimenting with new agentic AI frameworks as they emerge.

SKILLS

AI & GenAI — RAG architectures | LangChain | LangGraph | AWS Bedrock (Agents, AgentCore) | MCP

Backend — TypeScript/JavaScript | Node.js/Express | NestJS | Python | FastAPI | Django | PHP | Laravel | REST API

Frontend — React | Next.js | Vue.js | Nuxt.js | Livewire | Alpine.js

Cloud & DevOps — PostgreSQL | MySQL | Docker | Kubernetes | Linux | Git | CI/CD | AWS (Bedrock, Amplify, ECS, RDS, S3, Lambda, API Gateway) | Azure (Foundational / AI Services)

WORK EXPERIENCE

Summer Trainee, Software Development Specialist (AI/ML), Konecranes 05/2026 – Present
Hyvinkää, Finland

- Built multiple production-ready RAG applications on AWS Bedrock using Agents and AgentCore, processing over **100 internal XML, PDF, and XLSX enterprise documents** indexed in an S3 based vector store.
- Implemented RAG variants with AWS Bedrock, Bedrock AgentCore, LangChain, and LangGraph, and integrated them into a unified Next.js and FastAPI application exposing different RAG backends behind a shared conversational UI.
- Developed the entire Next.js and FastAPI application using Claude Code as the primary AI-assisted coding environment, which accelerated iteration speed while maintaining production-grade code quality.
- Architected a multi-agent system on AWS Bedrock with a supervisor agent orchestrating multiple collaborator agents, which enabled modular, task-specific agentic workflows across enterprise knowledge sources.
- Used PostgreSQL for user accounts, session data, and feedback storage, supporting evaluation and iteration across three RAG variants used by internal teams.
- Deployed the system using AWS Amplify, ECS, and RDS, collaborated with stakeholders to align chatbot capabilities and agentic workflows with business requirements, then documented the solution and handed it over to the internal team.

SENIOR SOFTWARE ENGINEER, RAMAKI GROUP OF COMPANIES 05/2024 – 07/2025
KABUL, AFGHANISTAN

- Led and coordinated a team of eight engineers in the development of Dara.af , an e-commerce platform (dara.af) supporting hundreds of product listings and daily customer orders, using Laravel, PostgreSQL, React, and Next.js.
- Designed and optimized PostgreSQL database schemas for complex transactional data.

- Built RESTful APIs; wrote unit, integration, and feature tests to ensure data integrity.
- Conducted code reviews and mentored junior developers, fostering a collaborative development environment.

SOFTWARE ENGINEER, PEACE GLOBAL LOGISTICS — 09/2022 – 04/2024 — KABUL, AFGHANISTAN
- Developed supply chain, logistics, and shipment tracking modules using NestJS, React, and Next.js.
- Designed and optimized PostgreSQL databases for logistics operations, handling order, inventory, and shipment data.
- Implemented reusable UI components in React + Tailwind for logistics dashboards.

Kabul University, Instructor (Python & Machine Learning) — 04/2022 – 10/2022 — Kabul, Afghanistan
- Taught Python programming and Machine Learning fundamentals to freshman and sophomore students.
- Covered data analysis, model training and evaluation, and practical ML tooling.

FULL STACK DEVELOPER, SMART FRIQI — 07/2021 – 09/2022 — KABUL, AFGHANISTAN
- Built ERP modules using Laravel, Nuxt.js, and PostgreSQL; added real-time features using WebSockets; developed dashboards for business management and operations monitoring.

PROJECTS

Enterprise RAG Assistant (Konecranes), AWS Bedrock (Agents, AgentCore), LangChain, LangGraph, FastAPI, Next.js, PostgreSQL, AWS Amplify/ECS/RDS

Internal enterprise knowledge assistant over heterogeneous documents (XML, PDF, XLSX), with multiple RAG variants (Bedrock-native, LangChain, LangGraph), a shared conversational UI, and a feedback-based evaluation pipeline. Fully built using Claude Code as the primary development environment.

Dara.af E-Commerce Platform (dara.af) , — 05/2024 – 07/2025
Tech: Laravel, PostgreSQL, React, Next.js, REST API

PGL ERP System, Tech: NestJS, React, Next.js, PostgreSQL, REST API — 09/2022 – 04/2024

Built logistics, shipments, HR, and inventory modules for the PGL ERP system and designed API endpoints that optimized data flow across the platform.

TGL Supplies System, Tech: Node.js (Express), React, PostgreSQL, REST API — 08/2023 – 12/2023

Built backend features and an admin panel for inventory and supplier management, using Express for the API layer and PostgreSQL for structured data storage, with a React-based interface for staff to manage stock and orders.

TeebAlhoor ERP, Tech: Laravel, Nuxt.js, PostgreSQL, REST API — 08/2021 – 05/2022

Developed and maintained the user, customer, product, file, and task management systems of the ERP.

EDUCATION

University of Jyväskylä, Master of Science in Artificial Intelligence — 08/2025 – Present — Jyväskylä, Finland

Kabul University, Bachelor of Computer Science (Software Engineering) — 2017 – 2021 — Kabul, Afghanistan

LANGUAGE SKILLS

PERSIAN — ENGLISH

Finnish
